

PARTNER SERVICE BRIEF

It's All About the Application

What happens if your critical applications are not available? Do your employees break out their No. 2 pencils and legal pads? Do your customers wait patiently to try again because they know you're doing your best? The application is your business and it needs to deliver the optimal customer experience while being scalable and secure.

F5 and ePlus work together to ensure your applications are available and secure. F5 has long been the leader in application availability and security. ePlus has expertise in both the F5 product suite, and all the technologies that your applications must interact with every day. With practices in cloud, security, datacenter, and networking, ePlus can work with you to ensure the applications important to you are performant, available, and secure.

No matter where your application resides, traditional data center, private cloud, public cloud, or containerized, F5 has a technology offering that fits your needs. ePlus is there as your trusted advisor to make recommendations based on our breadth of experience.

ePlus Services offer many flexible options, depending on how you and your organization prefer to engage. ePlus can give your personnel a hands-on white glove approach, educating and informing your teams of "Why?" not just the "How?". ePlus can also perform turnkey deployments from start to finish or just offer ad-hoc configuration assistance. The choice is yours.

Experience the ePlus + F5 Advantage:

BEFORE: ePlus can help you start your journey with F5 by offering proven use cases, performing Proof of Concepts, and working with F5 architects and your team to design the best architecture for your environment.

DURING: ePlus can perform green-field deployments or migrations from other vendors' or older F5 platforms. We have years of experience that allows us to transfer your workloads from one device to another, one platform to another, without a significant impact on your user experience.

AFTER: Since applications are dynamic and change constantly, the configuration that you started with may not be ideal later. ePlus can assess the security, manageability, and performance of your F5 deployments, as well as offer configuration advice and assistance for your production environment.

Ready to learn more? Preparation and success go hand in hand.
